RED ALERT TM is manufactured by GDI, Inc., under license from IREM Inc., OSAKA, JAPAN ©GDI Inc. 1981 All Rights Reserved

WARNING: This equipment generates, uses, and can radiate radio frequency energy and if not installed and used in accordance with the instructions manual, may cause interference to radio communications. As temporarily permitted by regulation it has not been tested for compliance with the limits for Class A computing devices pursuant to Subpart J of Part 15 of FCC Rules, which are designed to provide reasonable protection against such interference. Operation of this equipment in a residential area is likely to cause interference in which case the user at his own expense will be required to correct the interference.

GAME SERIAL NUMBER LOCATION

The serial number of this game is on a plate located in back of the cabinet on the lower left hand side. Please use this number in any correspondance with your distributor for service.

RED ALERTTM is manufactured by GDI, inc., under license from IREM Inc, OSAKA, JAPAN © GDI Inc. 1981 ALL RIGHTS RESERVED

RED ALERT - Cabinet Model

ADDENDUM TO RED ALERT MANUAL

Previously labeled PROM RAGA on the Main Logic Board (GDI-20563) has been reprogrammed. The PROM is now labeled RAGAB. This change affects several pages in the Red Alert Manual, as follows:

Page Affected						Cha	ange				
6	Change	line	5	of	ROM	TEST	DATA	from	5AC4	to	5B84
13	Change	line	5	of	ROM	TEST	DATA	from	5AC4	to	5B84
13	Change	line	5	of	Test	Date	a from	a 5AC4	to!	5B84	•

CAUTION: This machine may require degaussing when installed in it's proposed location, or moved to a new location. Degaussing is evident when color changes occur on the TV monitor as the cabinet is rotated from say, a north/south direction to an east/west orientation. The degaussing procedure is as follows:

- Start degaussing on left-hand side of cabinet adjacent TV monitor.
- 2. Next, do right-hand side of cabinet.
- 3. Now, degauss TV monitor from a position in front of monitor.
- 4. Finally, continue degaussing from in front of TV monitor while slowly stepping backwards to a point about 5 feet from screen.
- 5. Then, rotate degausser until it's field is perpendicular to TV monitor before turning it "off".

INSTALLATION

RECEIPT

Carefully remove the game from the shipping carton. Inspect the cabinet exterior for any evidence of damage incurred in shipment. Report any damage to the carrier.

LOCATION

The game can be placed in it's proposed location upon receipt. Carefully choose one that is:

- o Within 10 feet of a grounded commercial 110 volt power outlet that is free of inductive loads (motors, etc).
- o Free of moisture and not a water collection area.
- o Out of the direct rays of the sun.

Check machine basic specifications table for additional considerations.

BASIC SPECIFICATIONS

Power Requirements	110 volts, 60 Hz		
Temperature Rangé (includes storage)	0° C (32° F) Minimum 35° C (95° F) Maximum		
Humidity Range	95% Maximum		
Overall Dimensions			
Height	68.5 inches (1727mm)		
Width	24.5 inches (622mm)		
Depth	33.5 inches (851mm)		
Shipping Weight	225 lbs (102 Kgm)		

INSTALLATION

Install and check the game, as follows (see figs 1 and 2):

- o Unlock and remove back panel, using key obtained from small envelope stapled to rear door.
- o Locate power cord, coiled on bottom of cabinet interior, and extend cable out back of cabinet. Make sure strain relief knot in cable is positioned on inside of notch in lower right corner of cabinet opening.
- o Check that all wiring connections inside cabinet, especially those connectors on game logic board (green edge connector) and TV monitor chassis (white connector), are tight.

- o Pull out to defeat interlock by rear door.
- o Connect power plug to power outlet.
- o Set power switch, located on top of cabinet, to ON.
- o Pull out to defeat interlock by coin door. This applies power to game. Note that two incandescent lamps inside coin door light, fluorescent lighted attraction panel above TV monitor lights, and TV monitor illuminates to display attraction sequence of game. Allow attraction sequence to repeat several cycles.
- o Depress coin switch on door to initiate playable game cycle.
- o Check audio level of game. Adjust volume control, located on coin door, to level desired.
- o Press interlock by coin door to disconnect power to game.
- o Perform Installation Checkout Procedure, given in following paragraph.
- o Take total coins meter reading.
- o Close coin door and lock.
- o Set power switch, located on top of cabinet, to OFF.
- o Replace back panel.
- o Level machine using steel levelers provided.

REPORT ANY PROBLEMS FOUND TO YOUR DISTRIBUTOR

INSTALLATION CHECKOUT PROCEDURE

This is an equipment self test diagnostic program, and is conducted as follows:

- o Unlock and remove back panel, using key provided.
- o Locate 8 switch DIP on game logic board (fig 3), and set switch 8 to ON.
- o Pull out to defeat rear door interlock.
- o Pull out to defeat interlock by coin door to restore power to game, and observe following TV monitor display;
 - 1. A random speckled color pattern for about 40 seconds.
 - 2. GR RAM OK message along with color sequencing for about 10 seconds.
 - 3. ST RAM OK message along with color sequencing for about 3 seconds.
 - 4. A recycling colored bar pattern.
- o Momentarily depress service credit switch on coin door (fig 2), and observe

2. Components Behind Coin Door

3. 8 Switch DIP

a stationary distinct color pattern TV monitor display (fig 4). Pattern does not have to be interpreted at this time. Simply that it appears.

(A) SINGLE COLORED OBJECTS, SUCH AS LETTERS

(B) AIRCRAFT, ETC

4. Color Pattern

 Momentarily depress service credit switch (fig 2) on coin door, and observe TV monitor displays;

> DSW D8 KEY 1 00

KEY 2 01

TIMING -- (a constantly running two digit (in Hex notation) clock)

o Depress and hold LEFT control panel button down. Observe change in KEY 1 00 and KEY 2 01 displays - while button is held down.

 KEY 1 00
 changes to
 KEY 1 20

 KEY 2 01
 changes to
 KEY 2 21

o bepress and hold RIGHT control panel button down. Observe change in KEY 1 00 and KEY 2 01 displays - while button is held down.

 KEY 1
 00
 changes to
 KEY 1
 40

 KEY 2
 01
 changes to
 KEY 2
 41

Depress and hold FIRE control panel button down. Observe change in KEY 1 00 and KEY 2 01 displays - while button is held down.

KEY	1	00	changes to	KEY 1	04
KEY	2	01	changes to	KRV 2	05

- o Depress 1 FLAYER control panel button down, and observe KEY 1 00 display changes to KEY 1 01 during button closure.
- O Depress and held 2 PLAYER control panel button down, and observe KEY 1 00 display changes to KEY 1 02 during button closure.
- Momentarily depress coin switch on coin door, and observe the following TV monitor display appears:

ROM	TEST	DATA				
9		D2ED				
1		9 B 83				
2		42C9				
3		BDA9				
4		0355				
5	-	-5 164	5	2	84	f
6		0F 07				

THIS COMPLETES CHECKOUT PROCEDURE

- o Depress coin door interlock to remove game power.
- o Return switch 8 of 8 switch DIP on game logic board (fig 3) to OFF.

SOUND AND GAME CONTROL ADJUSTMENTS

These adjustments are located on the game logic and sound PCBs located inside the cabinet on the right side. All sounds are adjusted while game is in play at the point sound is audible. All DIP switches may be set with power disconnected from the equipment

GAME SOUND ADJUSTMENTS

VR NO.	ADJUSTS
1	Overall audio level of all sounds
2	All sounds associated with MIRV attack, including CAUTION
3	Dive bombing attacks .
4	Firing of rocket launcher
5	Rocket launcher explosions and attacking aircraft hits
6	Formation and bomber aircraft
7	Hovering helicopters
8	Voice

8 SWITCH DIP

	SV	VI TC	ועא ו	MBER				
1	2	3	4	5	6	7	8	GAME FUNCTION CONTROLLED
OFF	OFF							3 launchers per player
ON	OFF							4 launchers per player
OFF	ON							5 launchers per player
ON	ON							6 launchers per player
			ON					Additional launcher on score of 5,000 points
			OFF	1				Additional launcher on score of 7,000 points
				OFF	OFF			Continuous free play
				ON	OFF			l coin, 1 play
				OFF	ON			1 coin, 2 plays
				ON	ON			2 coins, 1 play
		OFF				OM		Upright cabinet. Do not disturb these switches
						<u> </u>	OFF	Microprocessor in game mode
							ON	Microprocessor placed in diagnostic mode

COLOR ADJUSTMENTS - GREEN, RED, BLUE

OPERATING INSTRUCTIONS

ONTROLS

he functions of the control panel, and associated operating controls, are as follows:

LEFT (RIGHT	FIRE	1 PLAYER
		_	2 PLAYERS

6. Control Panel

LEFT Moves rocket launcher left when depressed	LEFT	Moves	rocket	launcher	left	when	depressed
--	------	-------	--------	----------	------	------	-----------

RIGHT Moves rocket launcher right when depressed

FIRE Fires rocket launcher when depressed (rocket must clear top of screen or destroy an aircraft or bomb before another rocket can

be fired)

1 PLAYER When momentarily depressed, game is initialized for one player only. Game continues until all rocket launchers are destroyed.

Player and score is displayed on the upper left side of TV monitor.

When momentarily depressed, game is initialized for two players.

Game is interrupted for first player when one of his rocket launchers is destroyed, and then ititialized for second player. When second player looses a rocket launcher, game returns to point of interruption of first player, etc. Game continues until both players loose all their rocket launchers. Score of each player is displayed on top of TV monitor. Top score of day is displayed on top of TV monitor.

Coin door

Accepts coins in either slot, and all coins accepted are displayed as credits on lower right-hand side of TV monitor to a total of 99 credits. Depressing 2 PLAYER pushbutton on control panel subtracts one credit from total. Sepressing 2 PLAYERS pushbutton subtracts two credits from total. Additional coins must be inserted to play game when credits displayed total 00.

Power on/off Located on top of cabinet adjacent right rear corner. Controls Switch power to machine.

PLAY PREPARATIONS (with power on)

- o Insert coin(s) in either slot in coin door. All coins inserted, whether intended for single or double player play, are accepted as credits, and displayed on lower right-hand side of TV monitor.
- Press 1 PLAYER button if a one player game is desired, or 2 PLAYERS button when competition between two players is desired. Game initializes for one player, or first of two players, by blinking SCORE (1) display, located on upper left side of TV monitor. In two player competition, game initializes for second player by blinking SCORE (2) TV monitor display, located on upper right-hand side of screen. Credit total decreases by 1 or 2, depending on player button depressed.

PLAYING THE GAME

FIRST ATTACK IN DAYLIGHT - BOMBERS IN FORMATION WITH ATTACKING AIRCRAFT. This sequence is introduced both audibly and visually. "Red alert. Enemy aircraft approaching fast. Many jet fighters approaching. 20 jet fighters approaching. Destroy all aircraft by 1100 hours or MIRV will be launched".

In this sequence, bombers in formation move from left to right across the screen, and then from right to left, etc. During the attack, some break formation and attack the the launcher. The aircraft drop bombs in an attempt to hit the launcher. Also during the attack, a special red colored aircraft flying above the aircraft in formation appears and drops a red colored magaton bomb that slowly descends on country. When hours reach 1100, present fighter attack is interrupted by a flashing CAUTION on screed, followed by appearance of the MIRV.

The MIRV slowly descends, then breaks up into several bombs. They, in turn, also break up into several bombs. As a result, a shower of bombs slowly descend on the country.

Player participation during attack is to destroy all aircraft by firing rocket launcher. During the attack, player is to aviod direct hits by bombs - each of which costs him one rocket launcher, Also during the attack, player must destroy red bomb before it lands, or one rocket launcher is destroyed.

When MIRV appears, player must destroy it completely - otherwise the landing of any one will cost the player one launcher.

HINT: If you can't get out of the way of a bomb, shoot to destroy it.

SECOND ATTACK BY HELICOPTERS - DROPPING PARACHUTE BOMBS. Introduced by, "Helicopter squadron approaching. Destroy all helicopters by 1600 hours or MIRV will be launched".

Player participation during attack is to destroy all aircraft by firing rocket launcher. During the attack, player is to keep his launcher away from red areas created by exploding bombs - or loose a launcher. Both helicopters and bombs may be destroyed by rockets. However, if parachute, but not bomb, is hit, deflated parachute will drop bomb much faster.

MIRV attack, if launched, is a repeat of that in the first sequence above.

THIRD ATTACK AT NIGHT - HEAVY BOMBERS IN FORMATION. Introduced by, "Red alert. Night attack by bombers".

Player is aided by two searchlights. Object is to destroy all aircraft. When all aircraft are destroyed, game progresses to next frame (country). During attack, player must avoid direct hits by bombs. No time limit is imposed. No MIRV will be launched.

GAME FRAMES. Game repeats above cycles thru following countries, respectively: FRANCE, USA, ITALY, GREAT BRITAIN, GERMANY, JAPAN. However, as game progresses from frame to frame, the action of the game is stepped up.

SCORING. Scores for the game are totaled, as follows:

SCORING 20 POINTS 40 POINTS JET FIGHTER ATTACKING JET FIGHTERS DESTROYED BY MEGATON BOME ឱ 60 POINTS ATTACKING JET FIGHTERS DESTROYED BY MEGATON BOMB 100 POINTS 100,200,OR RED BOMBER 400 POINTS HELICOPTER 50 POINTS 20 POINTS OPEN PARACHUTE BOMB 40 POINTS CLOSED PARACHUTE BOMB NIGHT SOMBER 40 POINTS 50 POINTS

HOW LAUNCHERS ARE LOST. Rocket launchers are lost by:

- o A direct hit by a dropped bomb
- o Red bomb dropped by red plane lands anywhere
- o Launcher is in red area created by exploding parachute bomb
- o MIRV lands anywhere

MAINTENANCE

INTRODUCTION

Red alert incorporates built-in diagnostics as a servicing aid in the location and correction of troubles, as well as a method for the checkout of the game. The diagnostics are performed using the 8 switch DIP, located on the logic PCB (pge 7), in seven sequential test segments. These are, respectively:

- a. Graphic RAM
- b. Static RAM
- c. Color RAM
- d. PROM
- e. Input/Output
- f. EPROM
- g. Sounds

TEST PREPARATIONS

The game is prepared for testing, as follows:

- 1. Unlock and remove the back door.
- 2. Unlock and open the coin door.
- 3. Pull out to override the rear door interlock
- 4. Set switch 8 of the 8 switch DIP to ON.
- 5. Set on/off power switch to ON.

GRAPHIC AND STATIC RAM TEST PROGRAM

These two tests are automatically initiated in sequence when ooin door interlock is pulled out to apply power to game. These tests check for decoding errors and other problems in addressing or data. Observe the following normal events:

- a. A random color speckled pattern for about 40 seconds
- b. GR RAM OK message along with color sequencing for about 10 seconds.
- c. ST RAM OK message along with color sequencing for about 10 seconds.
- d. A recycling changing colored bar pattern.

A static pattern indicates an abnormal condition. Verify by repeating tests. (All tests are repeated by momentarily interrupting power.)

COLOR RAM TEST

This test is initiated when the service credit switch, located adjacent the volume control (fig 2), is momentarily depressed. The TV monitor display is the following color bar pattern:

- (A) SINGLE COLORED OBJECTS, SUCH AS LETTERS
- (B) AIRCRAFT, ETC

7. Color Bar Pattern

All bordering between colors should be clearly defined. If not, adjust blue, red and green potentiometers on logic PCB until borders between red and orange are clearly defined.

INPUT/OUTPUT TESTS

This test is initiated when the service credit switch is momentarily depressed. The TV monitor displays:

DSW D8

KEY 1 00

KEY 2 01

TIMING -- (a constantly running two digit (in Hex notation) clock)

Interpretation of the hexadecimal digits for each line is as follows:

Line 1 - DSW D8. DSW references the present condition of the 8 switch DIP; i.e., 8 the first four switches (1, 2, 3 and 4) and D the last four (5, 6, 7 and 8). Therefore, D8 signifies that switches 4, 5, 7 and 8 are on.

Line 2 - KEY 00. Condition of switches on control panel, as follows:

LEFT switch depressed displays 20 RIGHT switch depressed displays 40 FIRE switch depressed displays 04 1 PLAYER switch depressed displays 01 2 PLAYERS switch depressed displays 02 Line 3 - KEY 2 01. Condition of three control panel switches, along with those on line 2:

FIRE switch depressed displays 05 LEFT switch depressed displays 21 RIGHT switch depressed displays 41

Line 4 - TIMING -- Digits indicate number of times CPU is interrupted. Counting 00 through FF uniformly and then steadily recycling is the normal condition.

ROM TEST

The ROM test is a display of ROM TEST DATA on the TV monitor, as follows:

ROM TE	ST DATA	
0	D2ED	
1	9B83	
2	42C9	
3	BDA9	
4	0355	
5	SHEA 5 E	38 4
6	0F07	

The test is initiated when the service credit switch is momentarily depressed.

Interpretation of ROM TEST

	Game Board		
ROM	Coordinates	Line	Test Data
5	3 F	0	D2ED
6	3D	1	9B83
7	3B	2	42°C9
8	3н	3	BDA9
9	3E	4	0355
A	3C	5	5AC4 5884
В	3A	6	0F07

SOUND TEST

The sound test is conducted at the completion of the ROM TEST without disturbing power to the equipment, as follows:

- 1. With the ROM TEST DATA display on the TV monitor, set all the switches on the 8 switch KIP to OFF. ROM TEST DATA display remains on TV monitor.
- 2. Momentarily depress service credit switch.

3. Carefully set first four DIP switches and note audible analogue sounds, as follows:

DIP	SWITCH	SETT	INGS	_
1	2	3	4	Resultant Sounds
OFF	OFF	OFF	OFF	Formation aircraft
ON	OFF	OFF	OFF	Dive bombers
OFF	ON	OFF	OFF	Helicopters
OFF	OFF	ON	OFF	Launcher firing
ON	OFF	ON	OFF	Explosion #1
OFF	ON	ON	OFF	Explosion #2
ON	ON	ON	OFF	Explosion #3

- 4. Set DIP switch 5 to ON. Keep DIP switches 6, 7 and 8 OFF.
- 5. Carefully set first four DIP switches and note audible digital sounds, as follows:

DIP	SWI TCH	SETTI	NGS	Resultant Sounds	
1	2	3	4		
OFF	OFF	OFF	OFF	Melody #1. Starting sound	
ON	OFF	OFF	OFF	Melody #2. Ending sound	
ON	ON	OFF	OFF	Time signal	
ON	ON	ON	OFF	Chirping birds	
OFF	OFF	OFF	ON	Alarm	
ON	OFF	OFF	ON	Excellent	
OFF	ON	OFF	ON	Coin insertion	
ON	ON	OFF	ON	MIRV division	
OFF	OFF	ON	ON	Megaton bomb - long	
ON	OFF	ON	ON	Megaton bombo- short	
OFF	ON	ON	ON	Megaton bomb landing
